

I only need a 7 foot fence by my bedroom in the front corner by the street to block the train noise. The backyard neighbor and the side neighbor, I can put a 6 foot fence.

I lose sleep everyday and it is affecting my job at Boeing. I make wired assembly for the 737 MAX planes and it is A LOT of attention to detail work. I don't want to lose my job because of sleep deprivation.

The concrete fence provides sound-proofing. If I have to use plants it will take years to grow fully and provide the sound elimination of the train tooting its horn in the middle of the night.

Sincerely,

Suzanne L. Martin

more on back

- i. ^{7ft} The fence would NOT block the street corner line of sight, because it stops at the house.
- ii. The utility access has ~~not~~ the original chain link fence. I only need a 6 foot fence by the utility because it is by my garage.
- iii. My two neighbors will have a 6 foot fence because I am on a corner lot and my master bedroom is by the street side. The back and side neighbors don't need a 7 foot fence.
- iv. I will obtain a building permit on the street side of the fence because its 7 feet.

I will obtain a building permit for the entire concrete fence.

v. — Answer on front page.

* The drawing was rough, but I will get a better drawing of the project once approved.
