1. DEVELOPMENT IDENTIFICATION

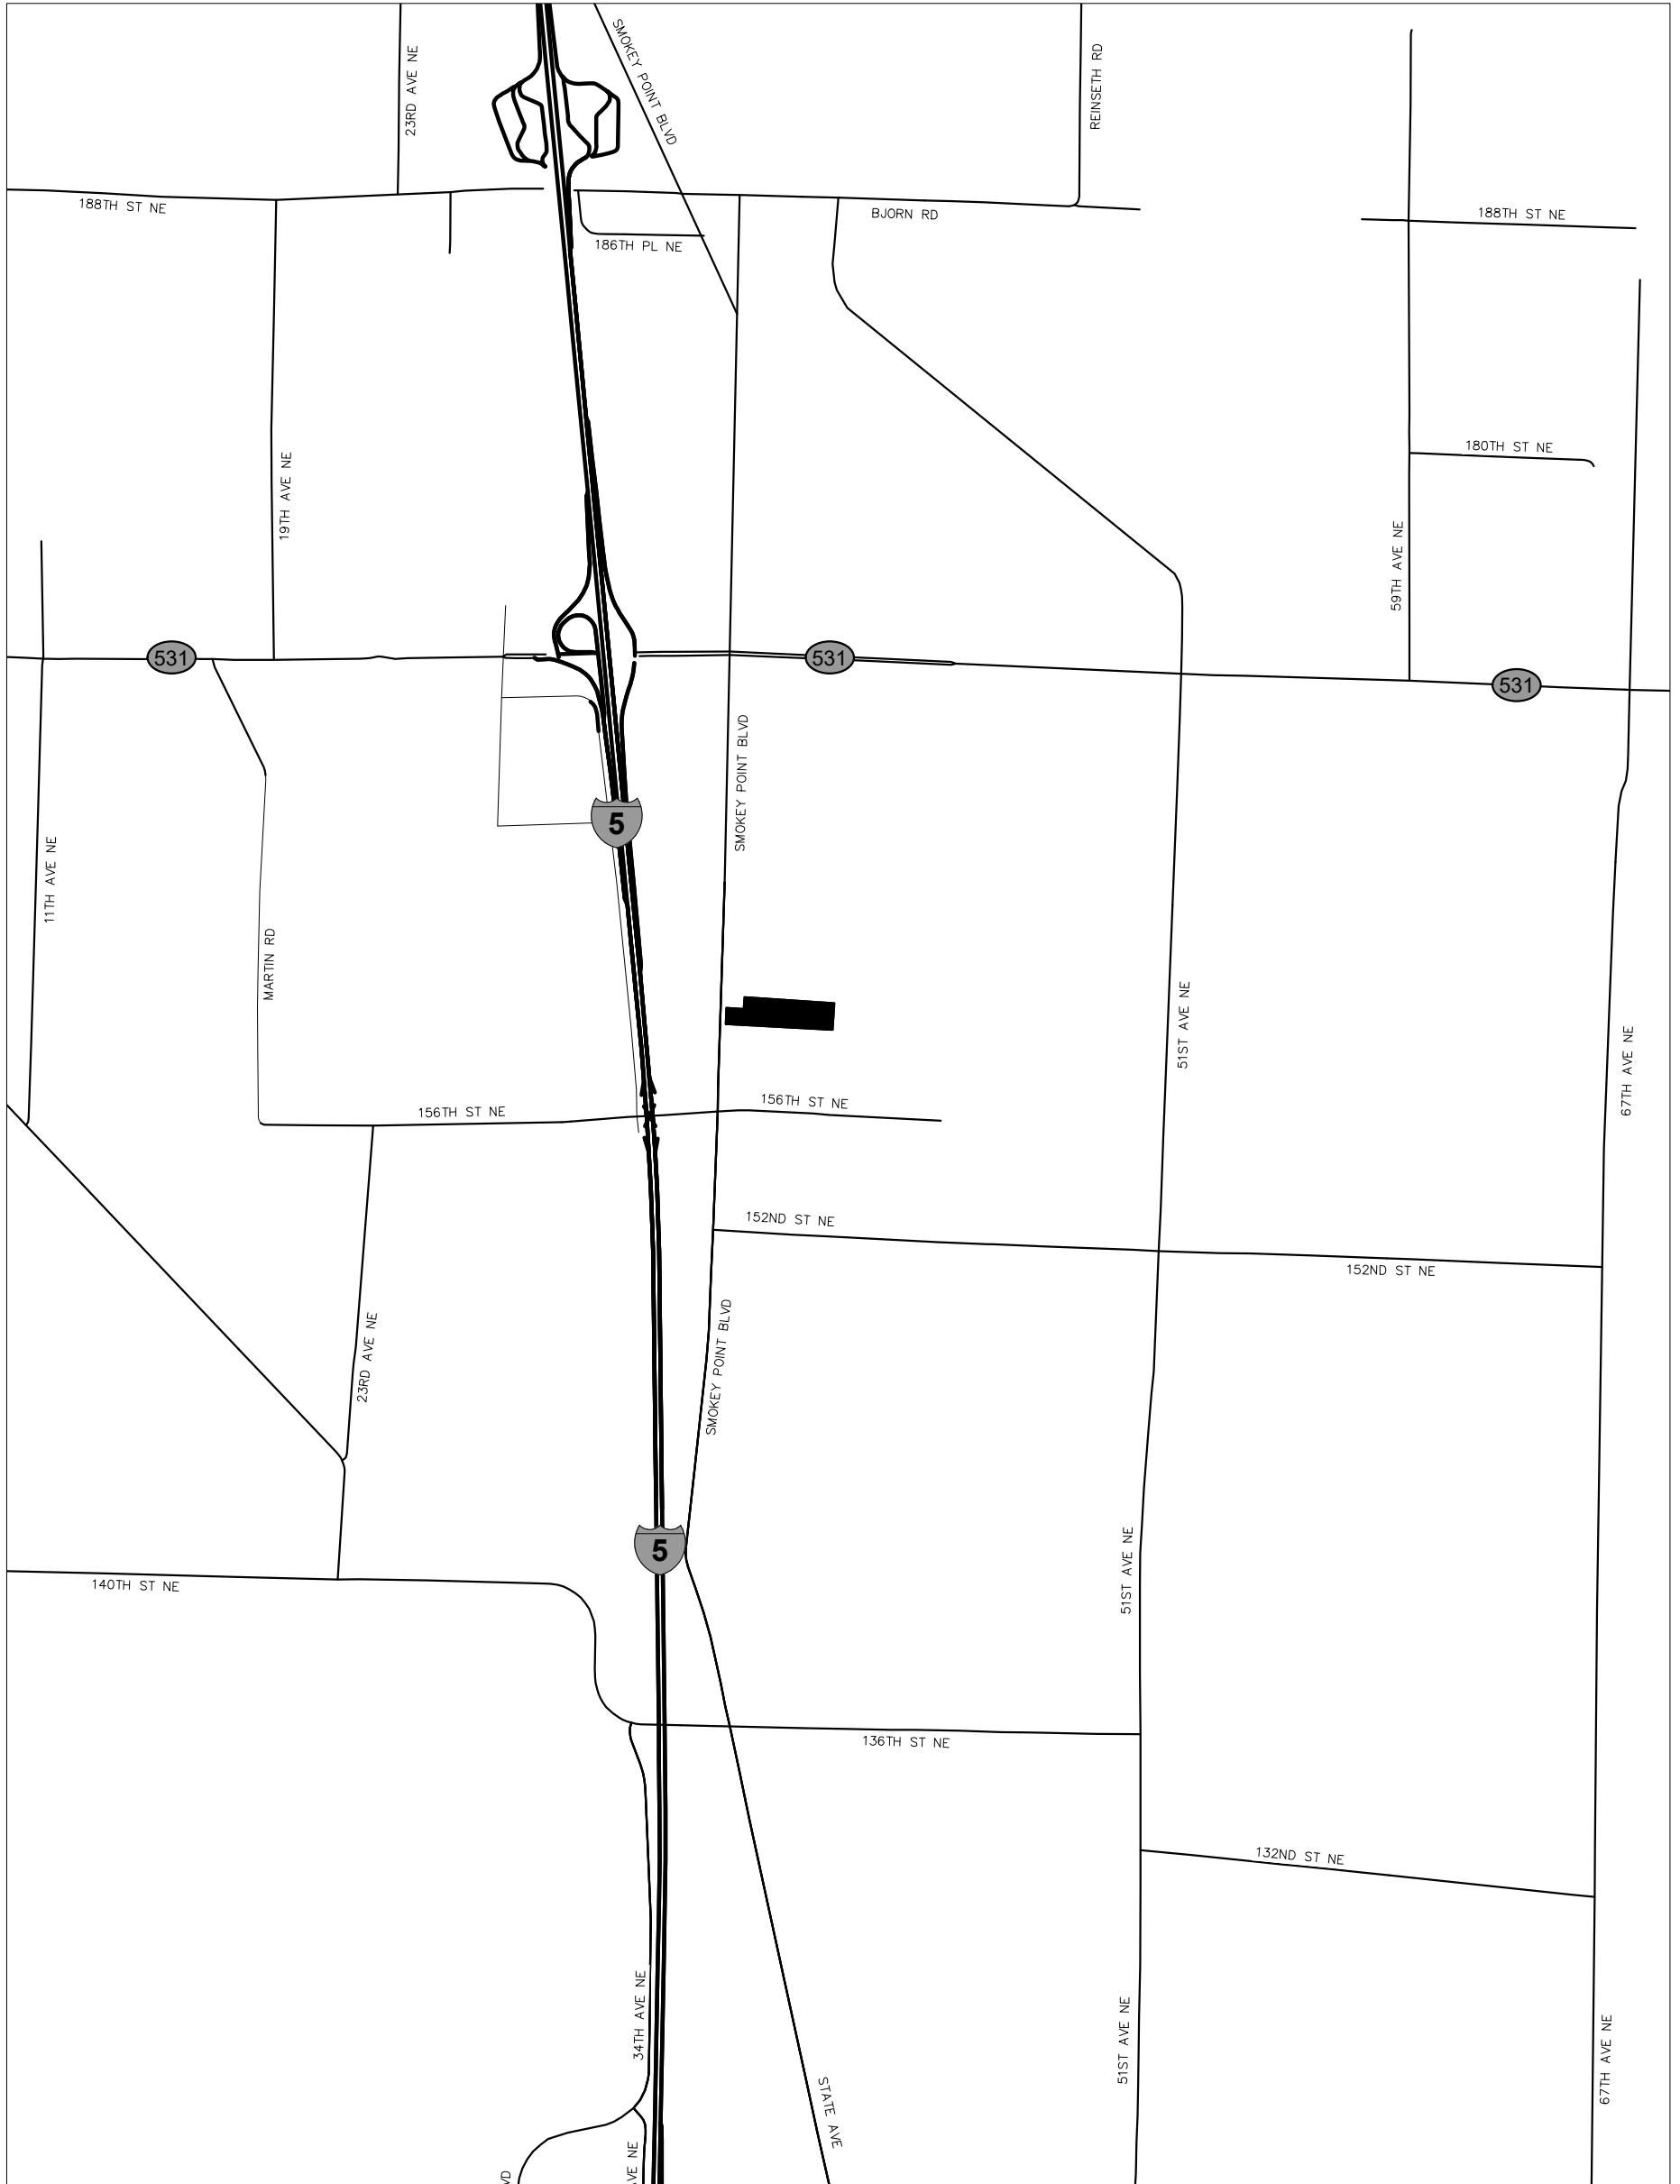

Kimley-Horn and Associates, Inc. has been retained to provide a traffic impact analysis for the proposed Kendall Subaru development. This report is intended to provide the City of Marysville, Snohomish County, and the Washington State Department of Transportation (WSDOT) with the necessary trip generation, trip distribution and level of service information to facilitate their reviews of the development. The Kendall Subaru development is located along the east side of Smokey Point Boulevard, north of 156th Street NE. A site vicinity map is included in Figure 1. The development is proposed to consist of 67,546 square-foot (SF) automobile sales and service.

Brad Lincoln, responsible for this report and traffic analysis, is a licensed professional engineer (Civil) in the State of Washington and member of the Washington State section of ITE.

2. METHODOLOGY

The analysis contained in this report is based on the City of Marysville traffic impact analysis guidelines, which requires the analysis of intersections impacted with 25 or more PM peak-hour trips. The trip generation calculations are based on average trip generation rates published in the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition* (2021). The trip distribution is based on the approved distributions provided by the City of Marysville for the *MIC South* area. The trip generation, trip distribution and scope of analysis was identified during the scoping process for the development.

The level of service analysis at the study intersections has been performed in accordance with the *Highway Capacity Manual (HCM) 6th Edition*. Congestion is generally measured in terms of level of service (LOS). Road facilities and intersections are rated between LOS A and LOS F, with LOS A being free flow and LOS F being forced flow or over-capacity conditions. A summary of the level of service criteria is included in Table 1.

DEVELOPMENT SITE

STUDY INTERSECTION

FIGURE 1
SITE VICINITY MAP

Table 1: Level of Service Criteria

| Level of ¹ Service | Expected Delay | Intersection Control Delay (Seconds per Vehicle) | |
|----------------------------------|-----------------------------|---|-----------------------------|
| | | Unsignalized Intersections | Signalized Intersections |
| A | Little/No Delay | ≤ 10 | ≤ 10 |
| B | Short Delays | >10 and ≤ 15 | >10 and ≤ 20 |
| C | Average Delays | >15 and ≤ 25 | >20 and ≤ 35 |
| D | Long Delays | >25 and ≤ 35 | >35 and ≤ 55 |
| E | Very Long Delays | >35 and ≤ 50 | >55 and ≤ 80 |
| F | Extreme Delays ² | >50 | >80 |

The level of service at two-way stop-controlled intersections is based on the average delay for the stop approach with the highest delay. The level of service at all-way stop-controlled intersections, roundabouts, and signalized intersections is based on the average delay for all vehicles. The level of service analysis has been performed utilizing the *Synchro 11.1, Build 1* software for signalized and stop-controlled intersections. The City of Marysville identifies acceptable level of service as LOS E for stop-controlled and signalized intersections along the Smokey Point Boulevard corridor. Other intersections have a level of service threshold of LOS D.

3. TRIP GENERATION

The trip generation calculations for the Kendall Subaru development are based on data published by the Institute of Transportation Engineers (ITE) in the *Trip Generation Manual, 11th Edition* (2021). The average trip generation rates for ITE Land Use Code 840, Automobile Sales (New), were used for the trip generation calculations. The weekday trip generation calculations for the Kendall Subaru development are summarized in Table 2.

¹ Source: *Highway Capacity Manual 6th Edition*.

LOS A: Free-flow traffic conditions, with minimal delay to stopped vehicles (no vehicle is delayed longer than one cycle at signalized intersection).

LOS B: Generally stable traffic flow conditions.

LOS C: Occasional back-ups may develop, but delay to vehicles is short term and still tolerable.

LOS D: During short periods of the peak hour, delays to approaching vehicles may be substantial but are tolerable during times of less demand (i.e. vehicles delayed one cycle or less at signal).

LOS E: Intersections operate at or near capacity, with long queues developing on all approaches and long delays.

LOS F: Jammed conditions on all approaches with excessively long delays and vehicles unable to move at times.

² When demand volume exceeds the capacity of the lane, extreme delays will be encountered with queuing which may cause severe congestion affecting other traffic movements in the intersection.

Table 2: Trip Generation Summary - Weekday

| 67,546 SF Automobile Sales (New) | Average Daily Trips | | | AM Peak-Hour Trips | | | PM Peak-Hour Trips | | |
|--|-------------------------|--------|----------|------------------------|-------|--------|------------------------|----------|--------|
| | In | Out | Total | Inbound | In | Out | Total | Outbound | In |
| Generation Rate | 27.84 trips per 1000 SF | | | 1.86 trips per 1000 SF | | | 2.42 trips per 1000 SF | | |
| Splits | 50% | 50% | 100% | Splits | 50% | 50% | 100% | Splits | 50% |
| Trips | 940.24 | 940.24 | 1,880.48 | 91.72 | 33.92 | 125.64 | 65.38 | 98.08 | 163.46 |

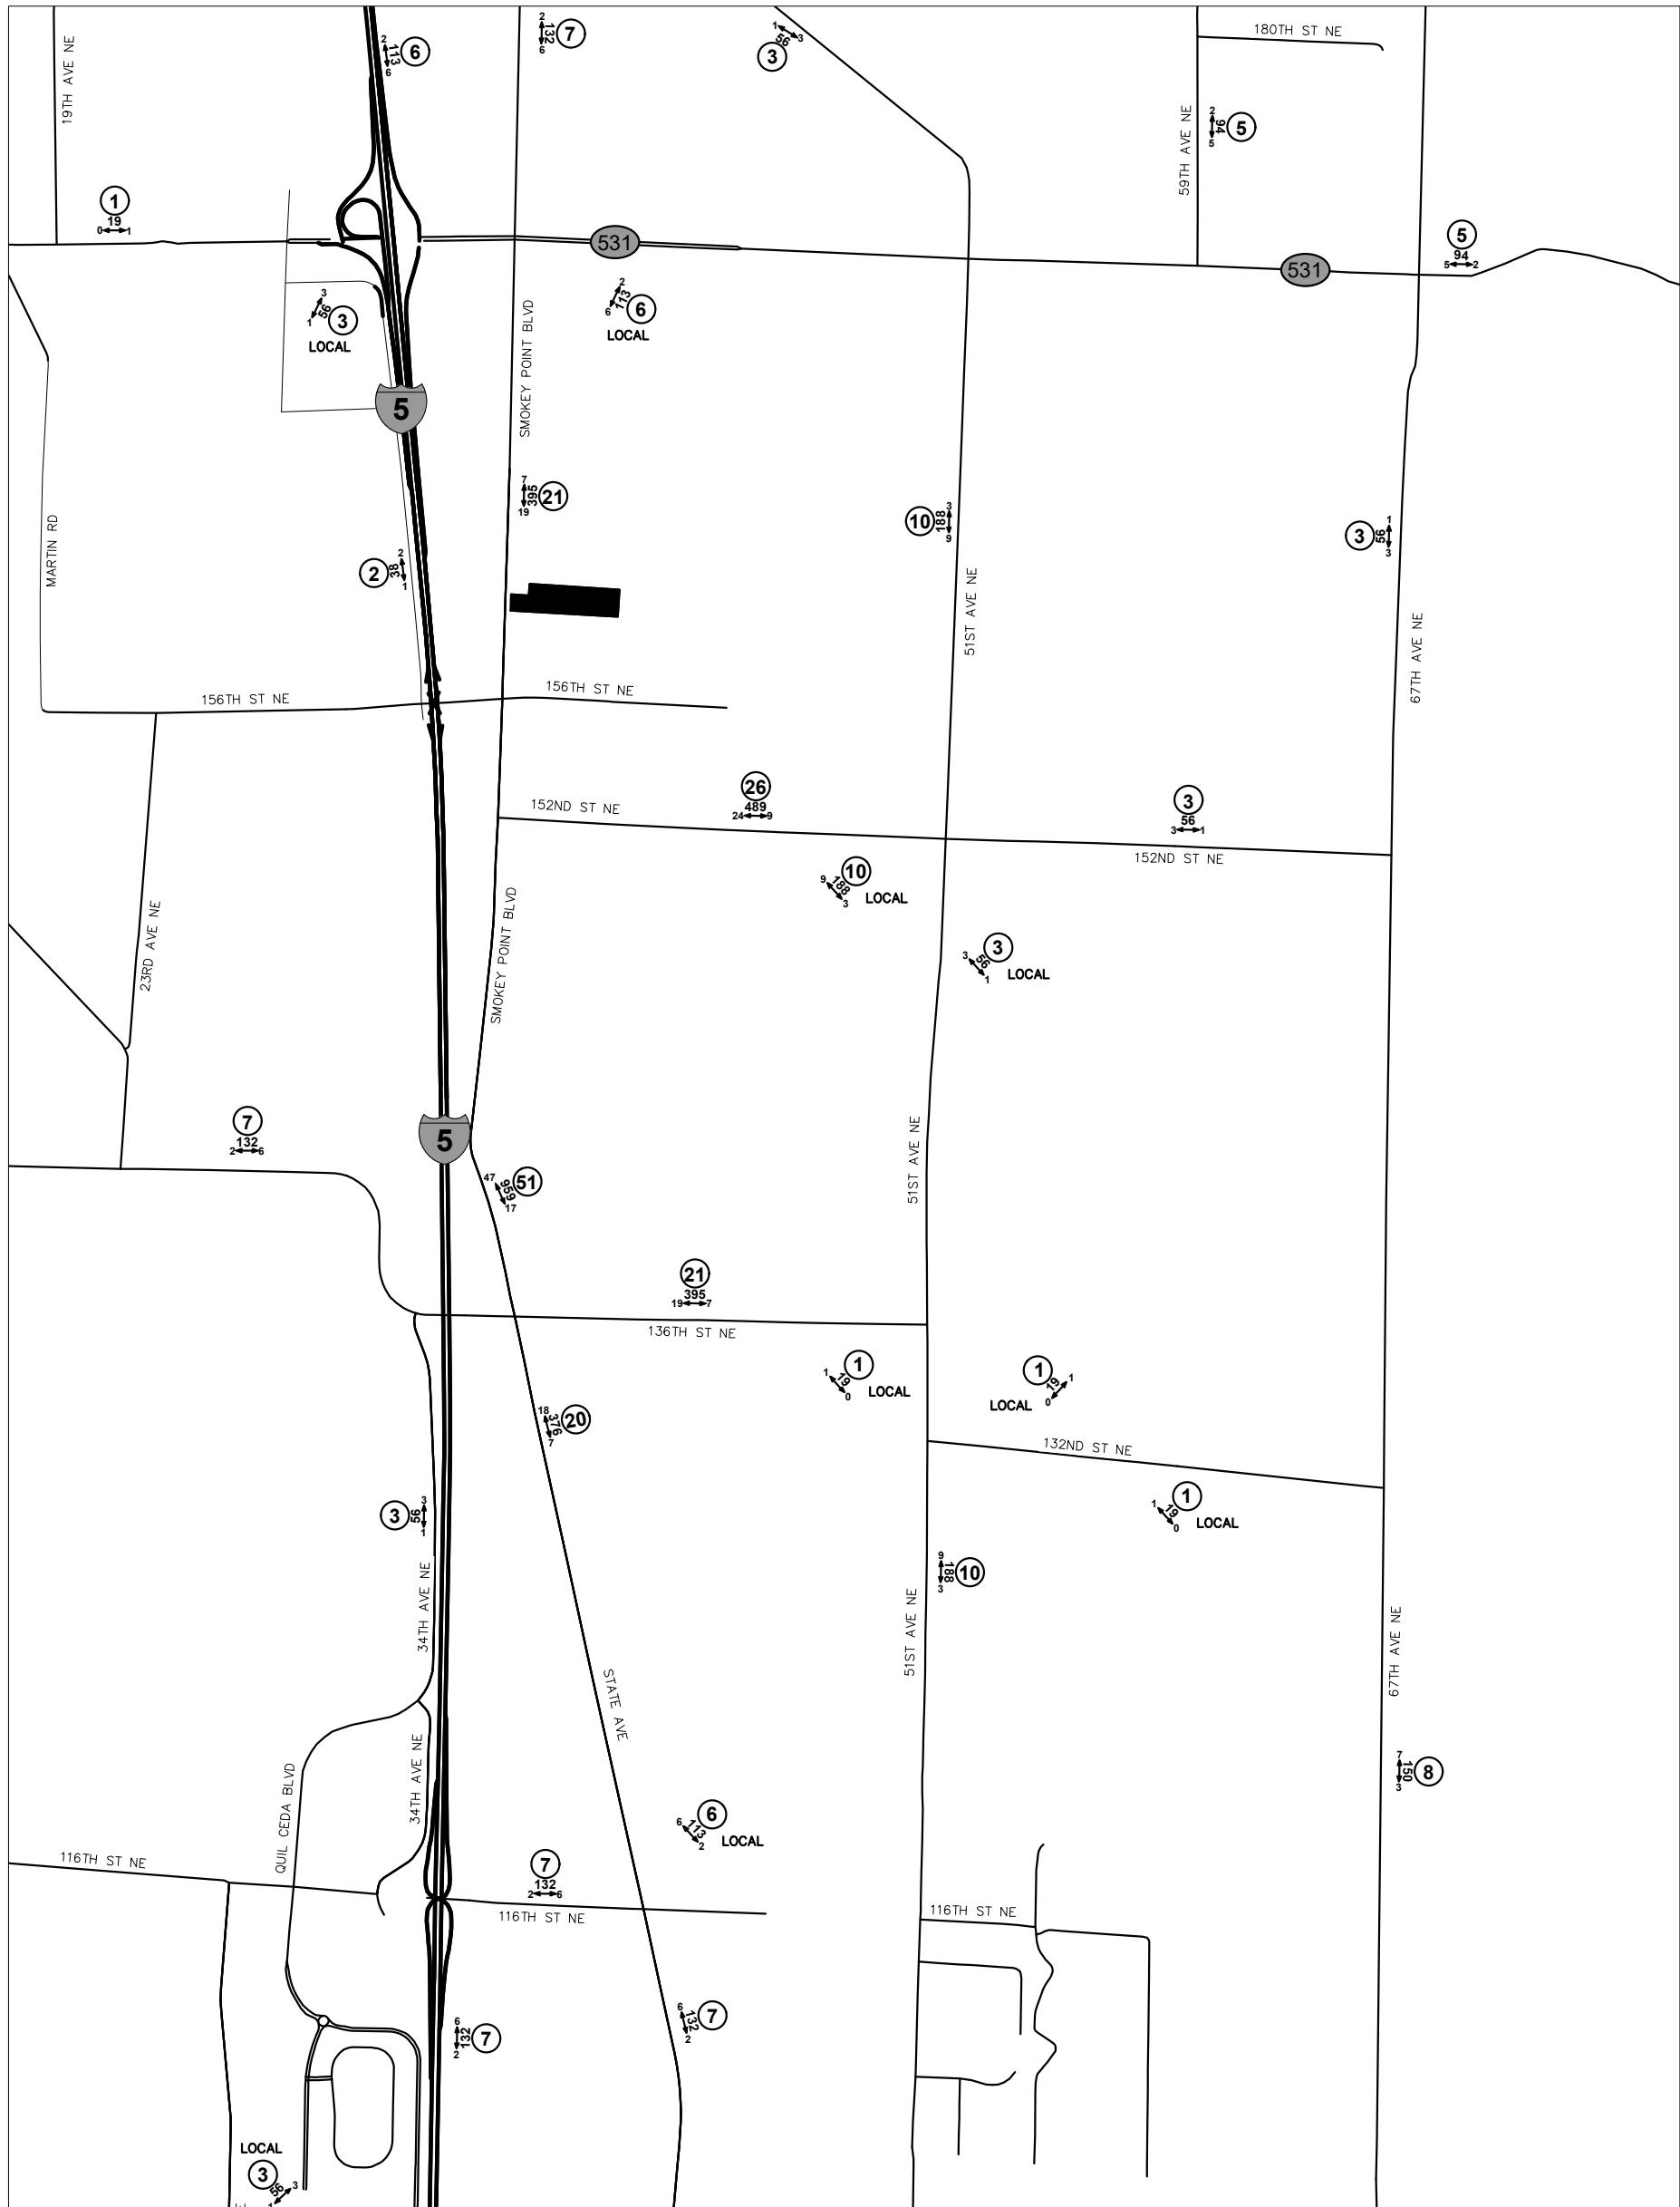

The Kendall Subaru development is anticipated to generate approximately 1,880 average daily trips with 126 AM peak-hour trips and 163 PM peak-hour trips. It is important to note that the trip generation calculations do not account for a 25% pass-by reduction, which is allowable under City of Marysville *Traffic Impact Analysis Guidelines*. This reduction is discussed in further detail as part of the traffic impact fee calculations.

4. TRIP DISTRIBUTION

The trip distribution for the Quality Auto Center development is based on distributions provided by the City of Marysville for new developments in the site vicinity based on the *MIC South* distribution. The trip distribution has been evaluated for the 2025 Opening Year conditions and the 2031 Horizon Year conditions.

4.1 2025 Opening Year

The opening year trip distribution is based on the existing roadway network. It is anticipated that 72% of the trips generated by the development will travel along Smokey Point Boulevard, twenty-one percent to and from the north and fifty-one percent to and from the south. Approximately 26% of the trips generated by the development will travel to and from the east along 152nd Street NE. The remaining 2% of the trips generated by the development will travel to and from local retail areas along Twin Lakes Avenue. Detailed trip distributions are shown in Figure 2 and Figure 3 for the weekday AM and PM peak-hours, respectively.

4.2 2031 Horizon Year

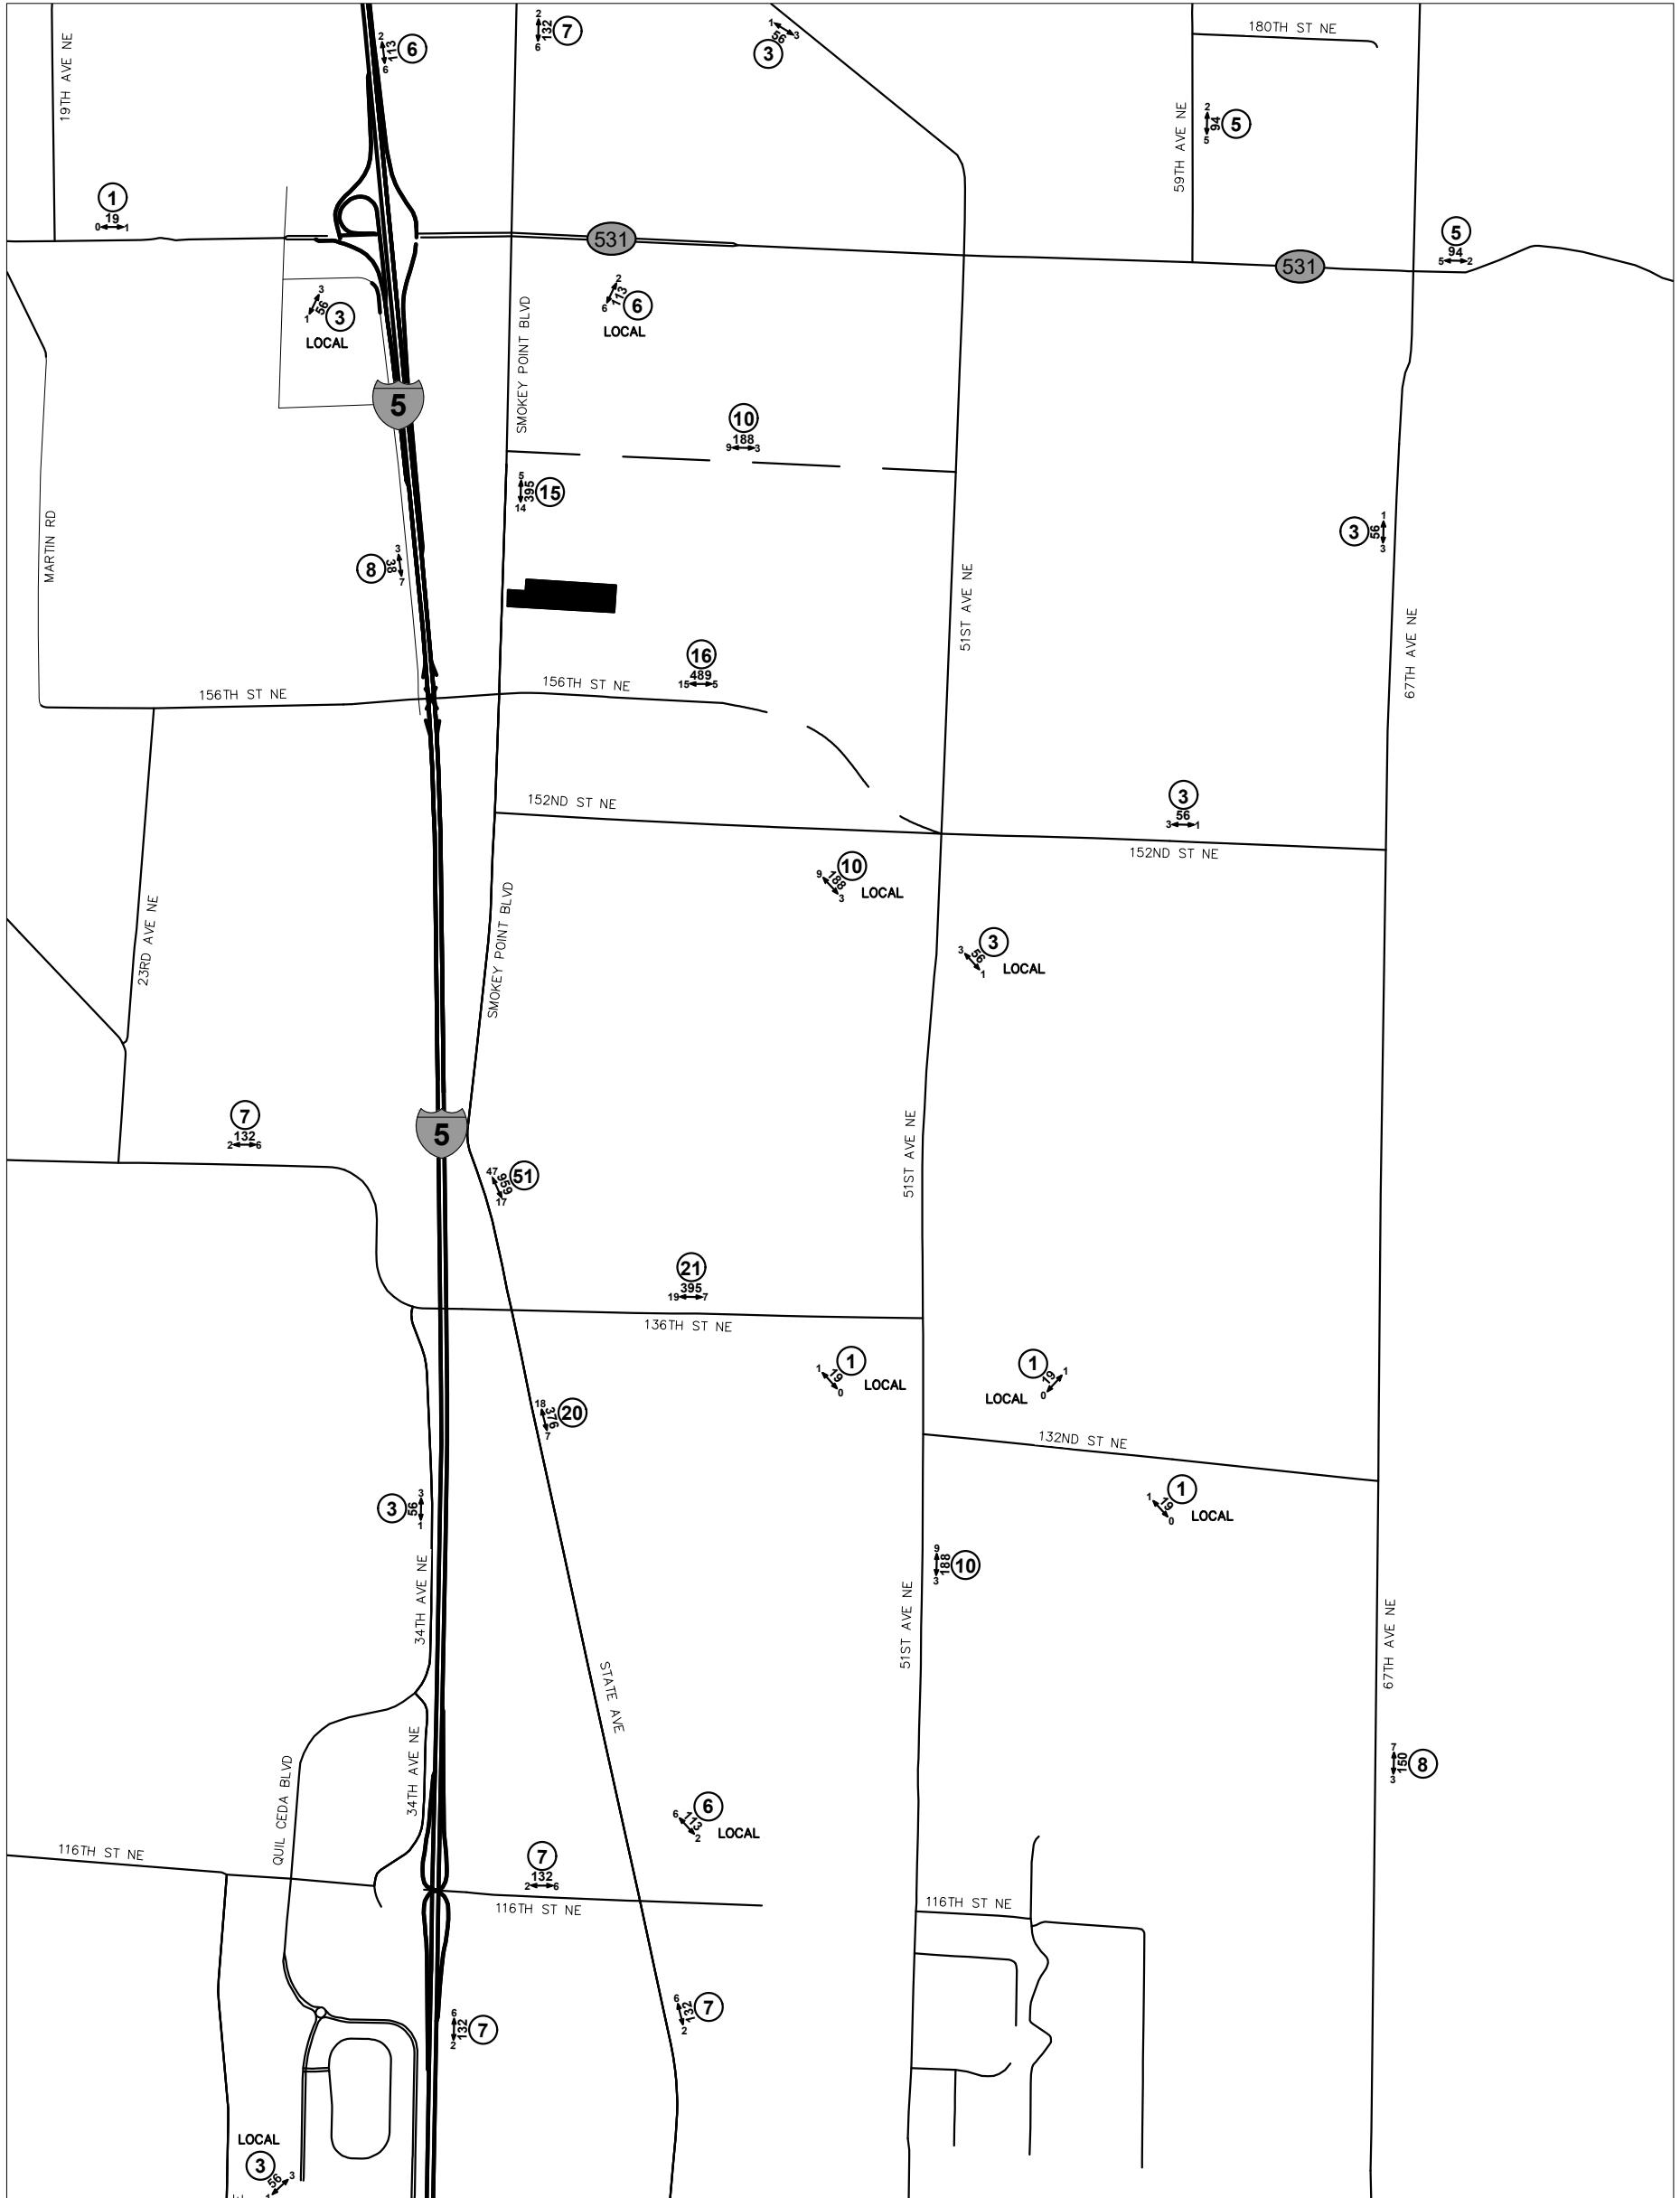

The horizon year distribution considers future roadway improvements, particularly the future interchange with Interstate-5 interchange with 156th Street NE and roadways east of Smokey Point Boulevard. These new roadways and the Interstate-5 interchange are anticipated to cause trips to divert from Smokey Point Boulevard and 152nd Street NE. It is anticipated that 66% of the trips generated by the development will travel along Smokey Point Boulevard, fifteen percent to and from the north and fifty-one percent to and from the south. Approximately 26% of the trips generated by the development will travel to and from the east, sixteen percent along 152nd Street NE and ten percent along 160th Street NE. It is estimated that 6% of the trips generated by the development will travel to and from the north along Interstate-5. The remaining 2% of the trips generated by the development will travel to and from local retail areas along Twin Lakes Avenue. The horizon year trip distributions for the weekday AM and PM peak-hours are shown in Figure 4 and Figure 5, respectively.

5. INTERSECTION LEVEL OF SERVICE ANALYSIS

The City of Marysville typically requires analysis at intersections impacted with 25 peak-hour trips. Intersection analysis has been performed at the following intersections:

1. 156th Street NE at Smokey Point Boulevard – Signalized
2. 152nd Street NE at Smokey Point Boulevard – Signalized
3. 152nd Street NE at 51st Avenue NE – All-Way Stop-Control
4. 136th Street NE at Smokey Point Boulevard – Signalized
5. 136th Street NE at 51st Avenue NE – Signalized
6. 128th Street NE at State Avenue - Signalized
7. Site Access at Smokey Point Boulevard – Two-Way Stop-Control

The study intersections have been analyzed for the 2022 existing conditions, the 2025 Opening Year conditions, and the 2031 Horizon Year conditions during the weekday PM peak- hour. The 2031 Horizon Year accounts for a 6-year period beyond the opening date, which is anticipated to occur in 2025. The study intersection locations are shown in Figure 6.

STUDY
INTERSECTIONS

5.1 Turning Movement Calculations

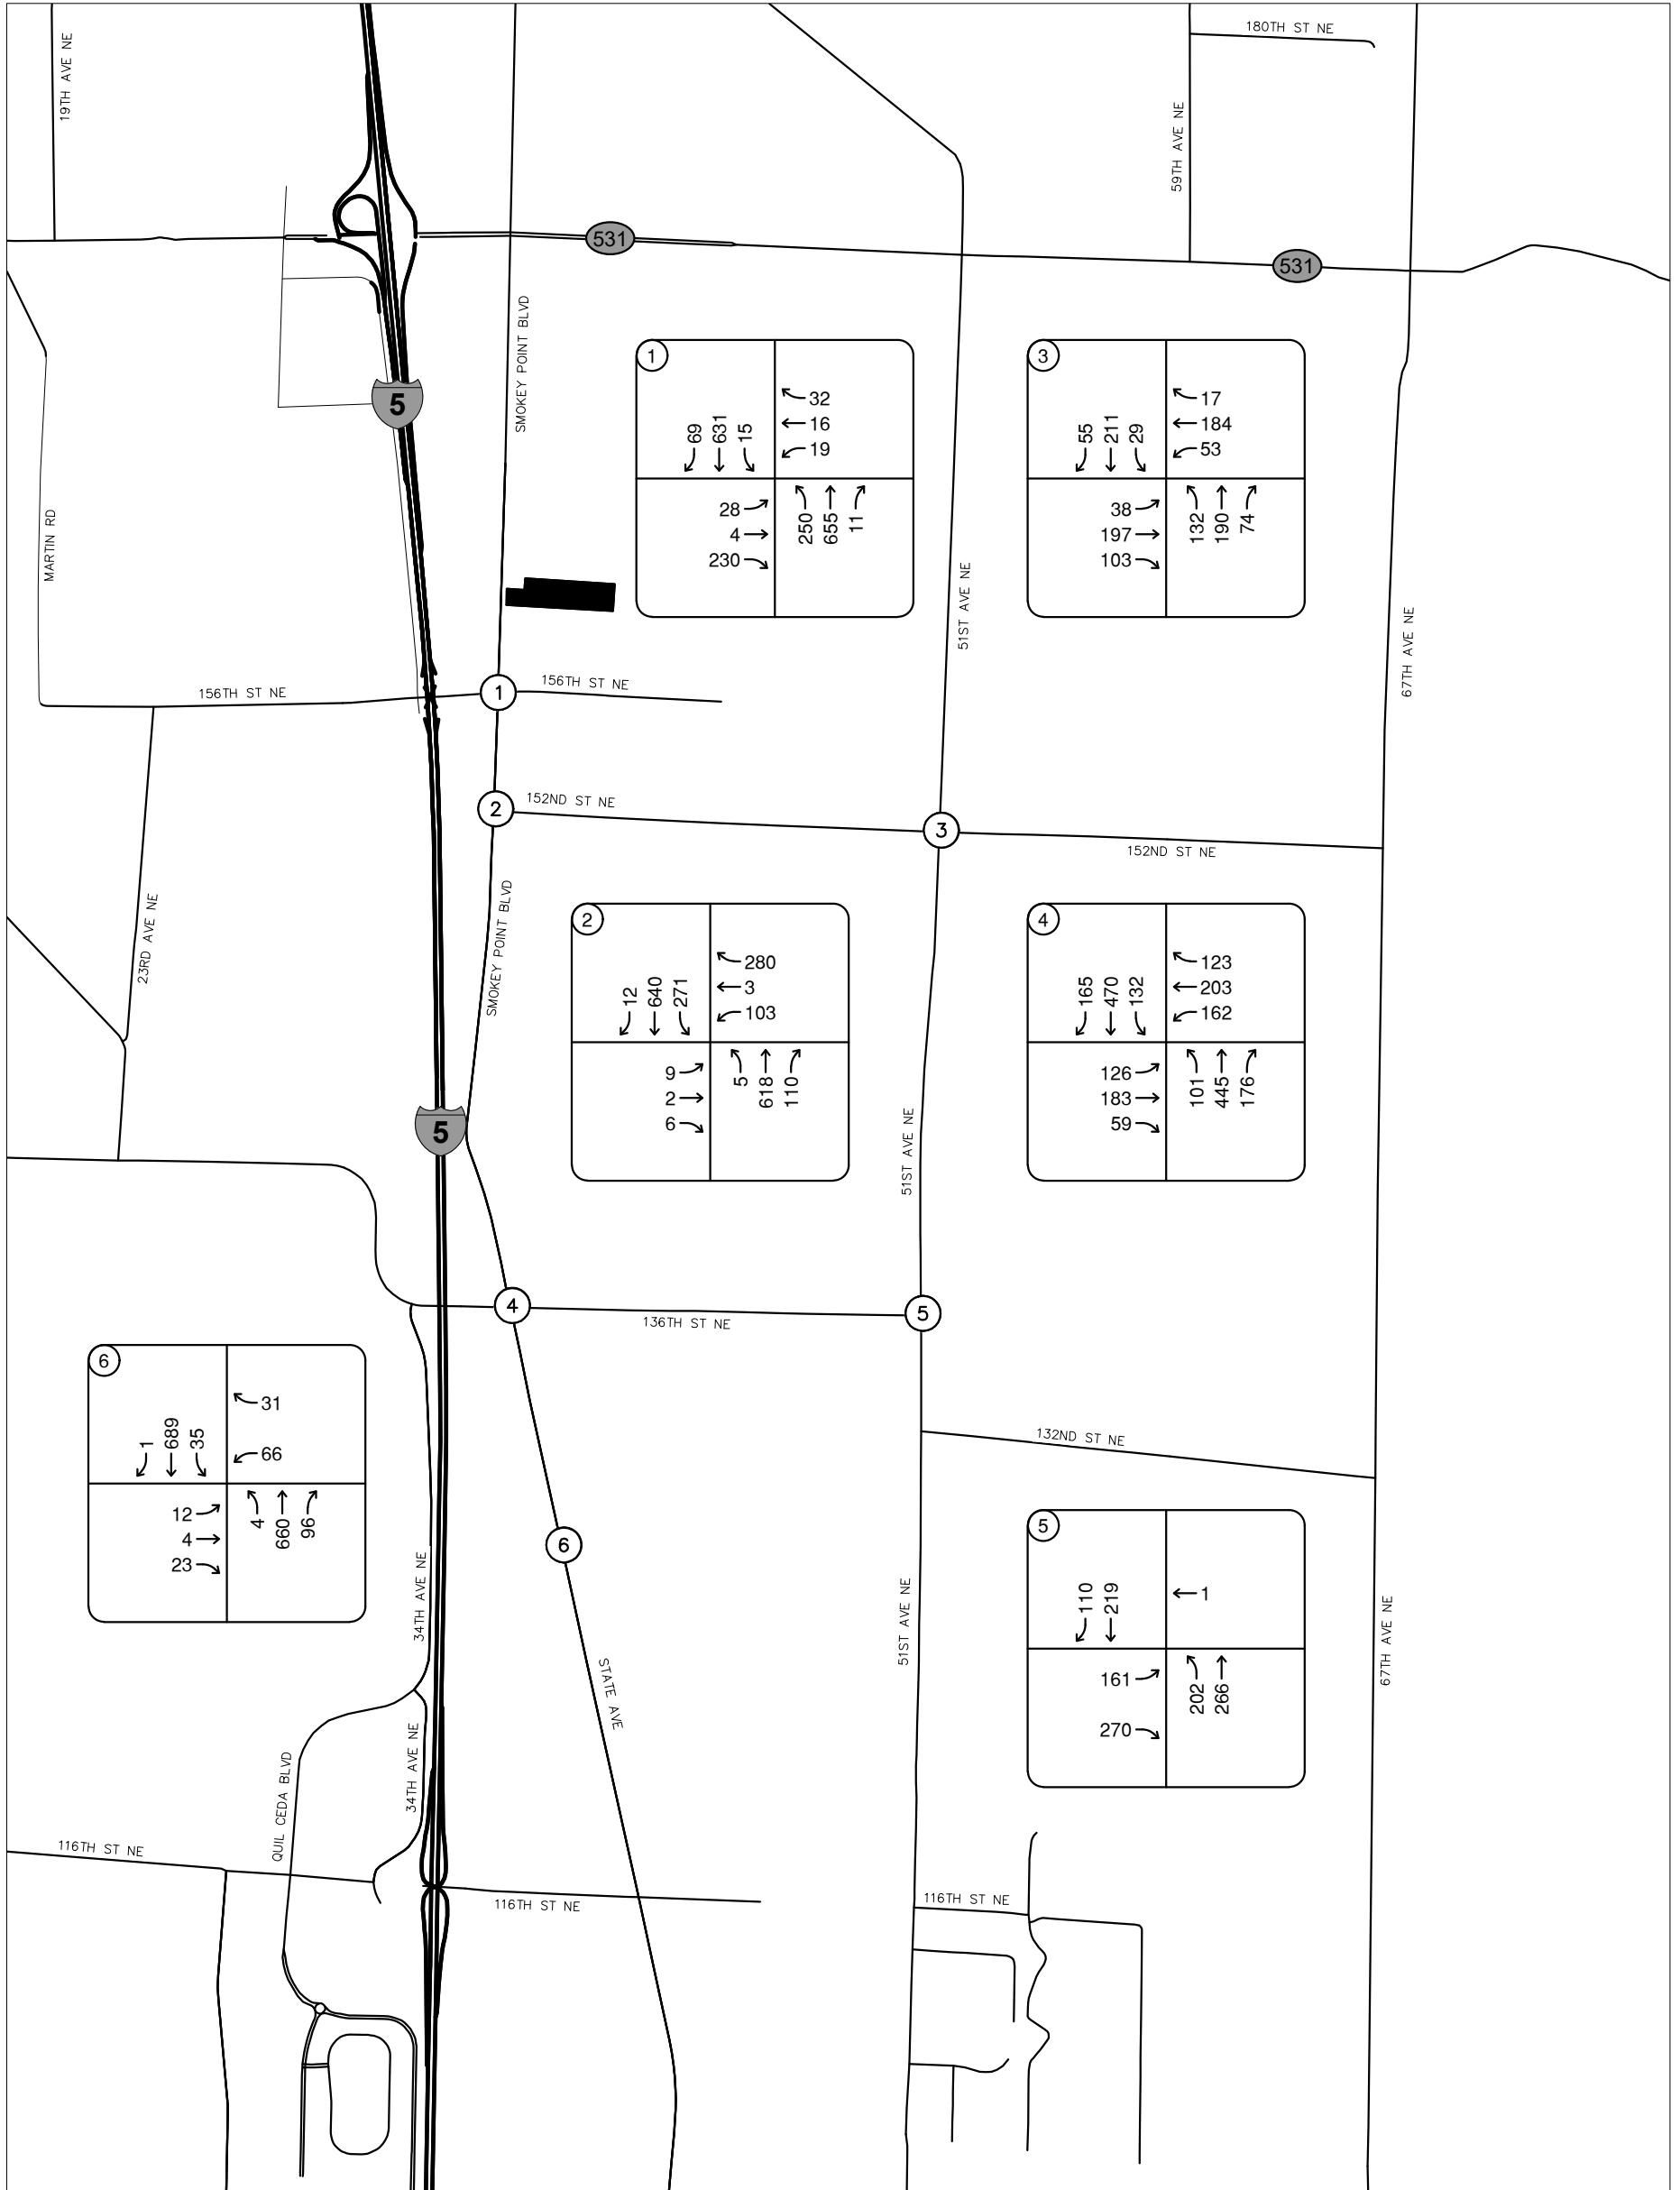

The existing weekday PM peak-hour (occurring between 4:00 and 6:00 PM) turning movements at the study intersections were collected by the independent count firm Traffic Data Gathering (TDG) in August 2022.

The 2025 and 2031 baseline turning movements at the study intersections have been calculated by applying a 3% annually compounding growth rate to the existing turning movements. The 2025 and 2031 future with development turning movements at the study intersections have been calculated by adding the trips generated by the development to the 2025 and 2031 baseline turning movements. The turning movement calculations, including detailed distributions of the trips generated by the development, are shown in the attachments. The following figures identify the turning movements for each scenario:

- Figure 7: Existing Turning Movements
- Figure 8: 2025 Baseline Turning Movements
- Figure 9: 2025 Opening Year Turning Movements
- Figure 10: 2031 Baseline Turning Movements
- Figure 11: 2031 Horizon Year Turning Movements

5.2 Level of Service Calculations

The level of service calculations have been performed utilizing the existing channelization, existing intersection control, heavy vehicle factors, and peak-hour factors from the turning movement counts. The parameters have been used for the existing, 2025 opening year, and 2031 horizon year conditions. The intersection level of service analysis for the existing and 2025 opening year conditions is summarized in Table 3.

Table 3: Level of Service Summary – 2025 Opening Year Conditions

| Intersection | Control | 2022 Existing Conditions | | 2025 Baseline Conditions | | 2025 Opening Year Conditions | |
|--|----------------------|--------------------------|----------|--------------------------|----------|------------------------------|----------|
| | | LOS | Delay | LOS | Delay | LOS | Delay |
| 1. 156 th Street NE at Smokey Point Boulevard | Signal | B | 13.5 sec | B | 14.0 sec | B | 15.4 sec |
| 2. 152 nd Street NE at Smokey Point Boulevard | Signal | B | 13.0 sec | B | 13.9 sec | B | 14.4 sec |
| 3. 152 nd Street NE at 51 st Avenue NE | All-Way Stop-Control | D | 25.8 sec | F | 51.5 sec | F | 54.5 sec |
| 4. 136 th Street NE at Smokey Point Boulevard | Signal | C | 26.9 sec | C | 28.9 sec | C | 30.0 sec |
| 5. 136 th Street NE at 51 st Avenue NE | Signal | B | 10.4 sec | B | 10.8 sec | B | 10.8 sec |
| 6. 128 th Street NE at State Avenue | Signal | A | 8.7 sec | A | 10.0 sec | A | 10.0 sec |
| 7. Site Access at Smokey Point Boulevard | Two-Way Stop-Control | --- | --- | --- | --- | C | 23.6 sec |

The intersection level of service analysis shows that the intersection of 152nd Street NE at 51st Avenue NE is anticipated to operate at LOS F under the 2025 baseline and 2025 Opening Year conditions. This intersection is discussed in more detail later in this report. The intersection level of service for the existing and 2031 horizon year conditions is summarized in Table 4.

Table 4: Level of Service Summary – 2031 Horizon Year Conditions

| Intersection | Control | 2022 Existing Conditions | | 2031 Baseline Conditions | | 2031 Opening Year Conditions | |
|--|----------------------|--------------------------|----------|--------------------------|-----------|------------------------------|-----------|
| | | LOS | Delay | LOS | Delay | LOS | Delay |
| 1. 156 th Street NE at Smokey Point Boulevard | Signal | B | 13.5 sec | B | 17.4 sec | B | 18.5 sec |
| 2. 152 nd Street NE at Smokey Point Boulevard | Signal | B | 13.0 sec | B | 16.6 sec | B | 16.9 sec |
| 3. 152 nd Street NE at 51 st Avenue NE | All-Way Stop-Control | D | 25.8 sec | F | 135.3 sec | F | 138.7 sec |
| 4. 136 th Street NE at Smokey Point Boulevard | Signal | C | 26.9 sec | D | 35.3 sec | D | 37.3 sec |
| 5. 136 th Street NE at 51 st Avenue NE | Signal | B | 10.4 sec | B | 12.1 sec | B | 12.2 sec |
| 6. 128 th Street NE at State Avenue | Signal | A | 8.7 sec | B | 12.6 sec | B | 12.7 sec |
| 7. Site Access at Smokey Point Boulevard | Two-Way Stop-Control | --- | --- | --- | --- | D | 29.7 sec |

The level of service calculations are included in the attachments.

5.3 152nd Street NE at 51st Avenue NE

The intersection of 152nd Street NE at 51st Avenue NE is anticipated to operate at LOS F under the 2025 baseline conditions and beyond. The intersection is planned to be signalized with additional channelization, which is included in the cost fee basis for the City of Marysville traffic mitigation fee. The addition of the signal and channelization will allow the intersection to operate at LOS C under the 2025 baseline, 2025 Opening Year conditions, 2031 baseline, and 2031 Horizon Year conditions. The level of service calculations are included in the attachments.

6. ACCESS ANALYSIS

The Kendall Subaru development only has frontage along Smokey Point Boulevard and is proposed to have one access point to Smokey Point Boulevard. The analysis shows that this access is anticipated to operate at LOS D, as shown in Table 3 and Table 4. Additional roadway improvements should not be required other than curb, gutter, and sidewalk improvements that may be required along the frontage of the site.

7. TRAFFIC MITIGATION FEES

The City of Marysville has an interlocal agreement with Snohomish County that provides for the payment of traffic mitigation fees to Snohomish County for City of Marysville developments. The City of Marysville also has an understanding with WSDOT for the payment of traffic mitigation fees.

7.1 City of Marysville

The City of Marysville traffic mitigation fees have been calculated using the commercial rate of \$2,220 per PM peak-hour trip. The Kendall Subaru development is proposed to generate 163.46 PM peak-hour trips, reduced to 122.60 PM peak-hour trips after the 25% pass-by credit identified in the City of Marysville *Traffic Impact Analysis Guidelines*. These trips will result in traffic mitigation fees of \$272,172.00.

7.2 Snohomish County

The City of Marysville and Snohomish County have an interlocal agreement that provides for the payment of traffic mitigation for impacts to Snohomish County roadways by City of Marysville developments. Traffic mitigation fees are based on predetermined area impacts or impacts to actual improvement projects. The Kendall Subaru development is located in CI-MA-1, which has a predetermined impact to Snohomish County roadways of 20%. The current Snohomish County fee for commercial developments located in the City of Marysville is \$157 per daily trip. The generation of 1,410.36 new daily trips (including the 25% pass-by reduction) and a 20% impact result in a Snohomish County traffic mitigation fee of \$44,285.30.

7.3 Washington State Department of Transportation

There are two major WSDOT improvements in the site vicinity that are impacted by trips generated by the Kendall Subaru development. These improvements are the 172nd Street NE/SR-531 corridor improvements and the 156th Street NE interchange with Interstate-5. Both of these improvements are identified as funded as part of the Connecting Washington legislation. Payment of WSDOT traffic mitigation fees should therefore not be a condition of the Kendall Subaru development.

8. CONCLUSIONS

The Kendall Subaru development is proposed to consist of a 67,546 SF automobile sales building. The development could generate up to approximately 1,410 average weekday daily trips with 94 weekday AM peak-hour trips and 123 weekday PM peak-hour trips with a 25% pass-by reduction. There are seven intersections that are anticipated to be analyzed for the weekday PM peak-hour. The total traffic mitigation fees for the development could be up to \$272,172.00 for the City of Marysville and \$44,285.30 for Snohomish County. These fees do not include a credit for roadway improvements. WSDOT traffic mitigation fees should not be required for the Kendall Subaru development.

Intersection Summary

Area Type: Other

Cycle Length: 122

Actuated Cycle Length: 66

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 16.9

Intersection LOS: B

Intersection Capacity Utilization 82.8%

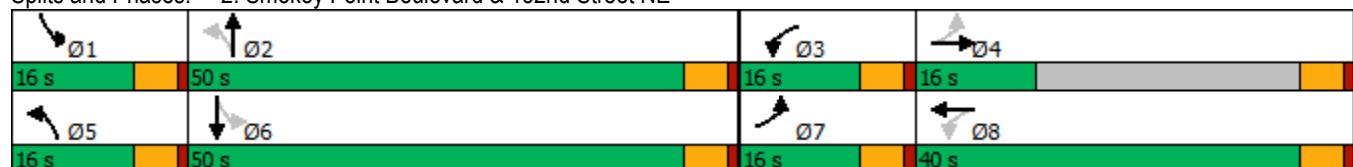

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 2: Smokey Point Boulevard & 152nd Street NE
